

World leaders in linear measurement

## SI100

A new Digital system from the Solartron Orbit stable! The SI 100 is an economical, single channel solution with integral display that can be output to a PLC via ModBus, the most widely used network in the Industrial world. The SI 100 is part of Orbit ACS, a new line of Digital systems specially built for automation and process control.

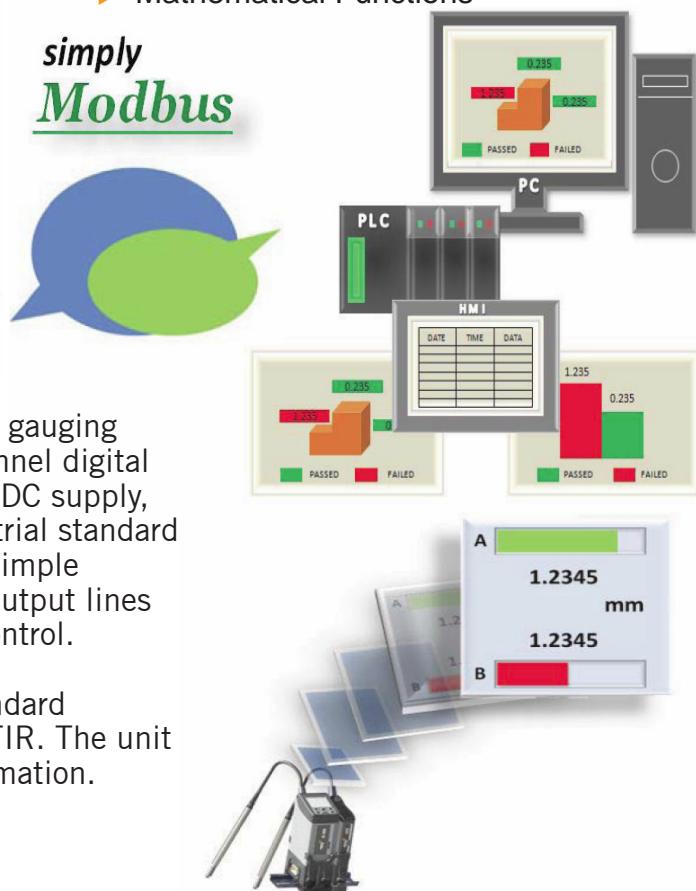

Solartron Metrology, the world leader in digital gauging probe innovation, introduces a new single channel digital probe with integral display. Powered by a 24 VDC supply, the module can communicate using the industrial standard Modbus RTU (or ASCII) protocol, providing a simple connection to most PLCs Discrete Input and Output lines are also provided for simple interfacing and control.

The SI100 naturally comes with all of the standard metrology functions such as zero, preset and TIR. The unit can also be programmed to provide limit information.

For a dual channel solution see the SI200.

- Modbus communication or Solartron ASCII Serial outputs
- High accuracy with Solartron's Real time Orbit error mapping
- 0.1 µm display resolution
- High sampling speed 5 ms per reading
- Eliminated losses due to analogue to digital conversion via PLC connection
- User defined keypad functions
- Colour display LCD screen
- Discrete I/O
- Available with large number of integral transducers
- Mathematical Functions

*simply*  
Modbus

## Typical Application

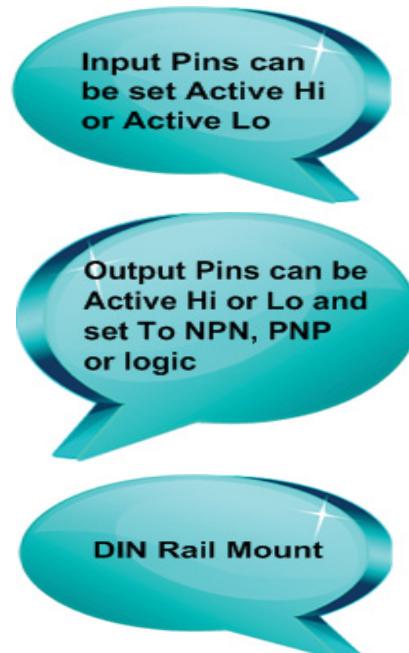

FROM MEASUREMENT SI100 to PLC via MODBUS

FROM MEASUREMENT SI100 to PLC USING PRINT INPUT AND RS-232 SERIAL PORT

## Interfacing to the SI100

12	Input 4: Spare
11	Input 3: Print
10	Input 2: Preset
9	Input 1: Zero
8	Output supply In
7	Output 3
6	Output 2
5	Output 1
4	RS232RX MODBUS B
3	RS232TX MODBUS A
2	0V Power In Return
1	18 - 32 V Power In

Interfacing the SI100 is simple using the terminal connections on the rear of the module.

## Serial Output Options

The SI100 provides a standard Modbus interface, it can be user configured via the menu screens to use pins 3 and 4 as an RS232 interface. Once configured in RS232 Mode the user can select several different protocols offering compatibility with Solartron's SI3000, SI1500 and C55. This is for retrofit/replacement applications.

## Accessories

+24 VDC Power Block and Mains Lead (2 m).  
 Spare Mounting Modules.  
 Firmware Upgrade Cable. (USB A to Mini B)  
 Upgrade kit SI100 to SI200.

World leaders in linear measurement

## SI200

A new Digital system from the Solartron Orbit stable! The SI 200 is an economical, dual channel solution with integral display that can be output to a PLC via ModBus, the most widely used network in the Industrial world. The SI 200 is part of Orbit ACS, a new line of Digital systems specially built for automation and process control.

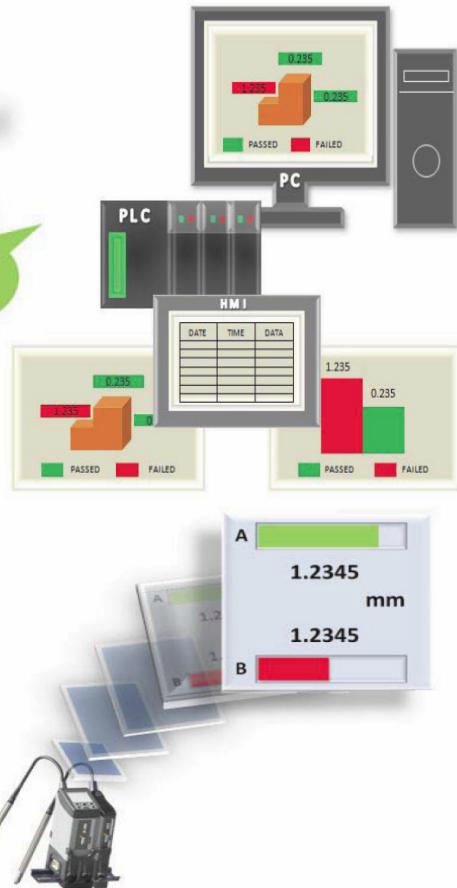

Solartron Metrology, the world leader in digital gauging probe innovation, introduces a new dual channel digital probe with integral display, which can be connected to any Solartron Digital probe to provide a two probe measurement system. Powered by a 24 VDC supply, the SI200 module can communicate using the industrial standard Modbus RTU (or ASCII) protocol, providing a simple connection to most PLCs. Discrete Input and Output lines are also provided for simple interfacing and control.

The SI200 naturally comes with all of the standard metrology functions such as zero, preset and TIR. The unit can also be programmed to provide limit information.

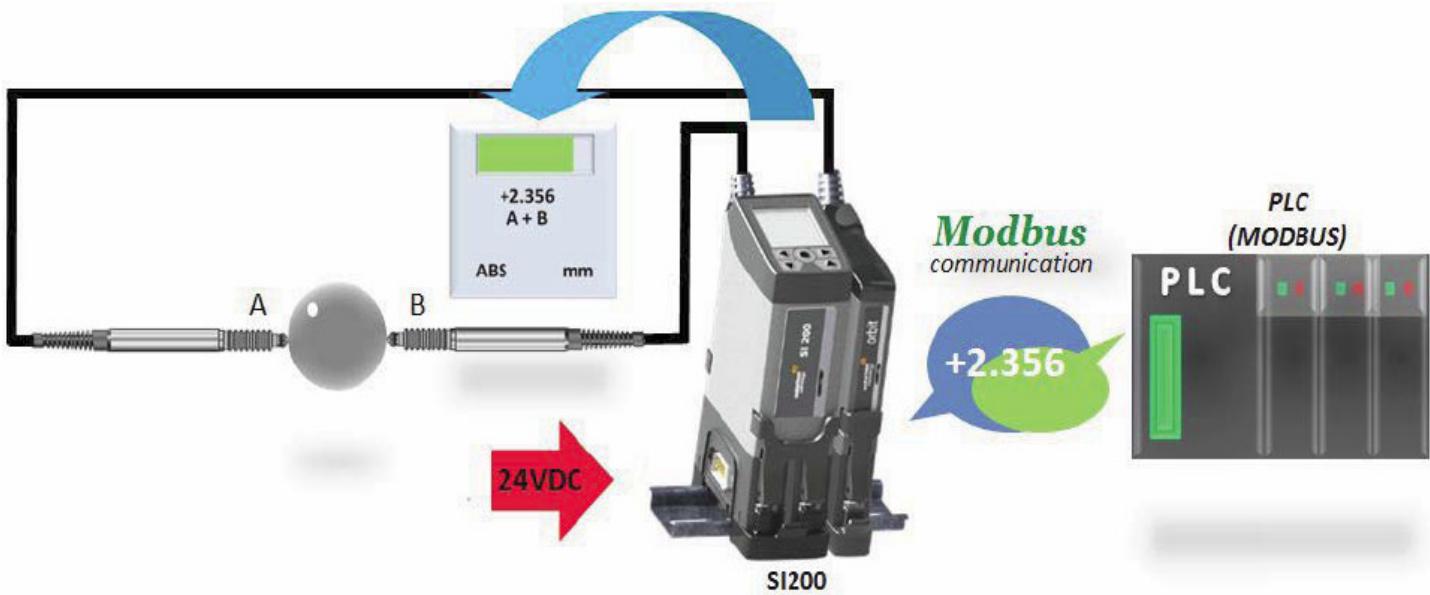

The SI200 can perform standard mathematical functions such as A+B or A-B and show the result on the dual channel display.

- ▶ Modbus communication or Solartron ASCII Serial outputs
- ▶ High accuracy with Solartron's Real time Orbit error mapping
- ▶ 0.1 µm display resolution
- ▶ High sampling speed 5 ms per reading
- ▶ Eliminated losses due to analogue to digital conversion via PLC connection
- ▶ User defined keypad functions
- ▶ Colour display LCD screen
- ▶ Discrete I/O
- ▶ Available with large number of integral transducers
- ▶ Mathematical Functions
